Subject: Sheldrake Lake

Hi,

I am new to the Sheldrake Lake subdivision, and I would like to thank you for the information regarding the status of the Lake.

One thing that concerns me is the concentration of effort on the aeration of Sheldrake Lake, but with the PCB problem at Five Island Lake, I would think that there would be more concern regarding the auto wrecking company that exists on the edge of the Sheldrake Lake incoming river/watershed.

Do you know if anyone has tested the soil near the auto wreckers? In my rather limited experience working in liability insurance, I can almost guarantee you that pollutants are running off the land of the auto wreckers and into our watershed. How an auto wrecker can have zoning approved so close to a Lake is how the costly fiasco of Five Island Lake originated.

Please allieviate my worries, and tell me that this auto wrecker has been thoroughly examined to prevent another such accident.

Many thanks,
Steve
