Subject: Taxonomic key for mites

Hello. I am working on a headwater stream project for the Pacific Northwest Research Station in Olympia, Washington. One of the aspects of the project includes collecting aquatic invertebrates using a drift net. I am in the process of identifying the invertebrates and am in need of a taxonomic key for mites. I do not know if all of the mites we have collected are technically aquatic, so I am hoping you can recommend a key that might include aquatic and terrestrial mites. Thank you!

Peace, Karen
